Employment, Earnings and Hours Seasonally - Adjusted Series

1961-1971

Emploi, Rémunérations et Heures Séries Désaisonnalisées

1961-1971

INTRODUCTION

This report presents seasonally-adjusted statistics for a larger number of series than those published regularly in "Employment, Earnings and Hours" (catalogue No. 72-002) and in the "Canadian Statistical Review" (catalogue No. 11-003). The title of this volume and its content have been changed although the catalogue number continues to be 72-206. The publication is now organised into four parts as follows:

Part - "A": Employment Indexes

Part - "B": Average Weekly Earnings

Part - "C": Average Weekly Hours

Part - "D": Average Hourly Earnings

Series, not adjusted for seasonal variations, are obtained from the monthly survey of Employment, Payrolls and Manhours. This survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. The reference period is the last week in each month. Further details as well as definitions and explanations relating to this survey may be obtained from the "Notes" in the monthly publication "Employment, Earnings and Hours". It may be noted that data for 1971 are preliminary and therefore subject to revision.

The seasonal adjustment method applied to the series contained in this publication is the computerized ratio-to-moving average method. The standard computer program used is the X-11 variant of the United States Bureau of the Census Method II(1). Various options are available for seasonal adjustments of data in this programme. The option used for series in parts A, B and D is "Adjustments of Trend Cycle for Strikes", which modified extreme values before computing trend cycle. This adjustment for extremes substantially reduces the effect of major, prolonged strikes or similar irregular occurrences. It may be noted, however, that sharp movements on account of business cycle peaks or troughs are similarly affected. The Average Weekly Hours" series

(1) The U.S. Bureau of Census has produced several publications on this subject. For a general description, see U.S. Bureau of the Census "Technical Paper No. 15" - The X-II variant of the Census Method II Seasonal Adjustment Program; February 1967.

Le présent bulletin contient un plus grand nombre de séries désaisonnalisées que la publication Employment, Earnings and Hours (n° 72-002 au catalogue) et la Revue Statistique du Canada (n° 11-003F au catalogue) ne publient régulièrement. Le titre et le contenu du bulletin ont changés mais le numéro au catalogue demeure le même: 72-206. Le bulletin comporte désormais quatre parties:

Partie "A": Indices de l'emploi

Partie "B": Rémunérations hebdomadaires moyennes

Partie "C": Heures hebdomadaires moyennes

Partie "D": Rémunérations horaires moyennes

C'est l'enquête mensuelle sur l'emploi, la paie et les heures-hommes qui fournit les séries non désaisonnalisées. Cette enquête n'est menée qu'auprès des sociétés d'une certaine taille, c'est-à-dire celles qui comptent 20 salariés ou plus au cours d'un mois quelconque de l'année. La période de référence est la dernière semaine de chaque mois. Le bulletin mensuel Employment, Earnings and Hours donne, dans ses "notes", des détails supplémentaires ainsi que des définitions et des explications relatives à cette enquête. Il convient de remarquer que les données de 1971 sont provisoires et, par conséquent, sujettes à révision.

Pour désaisonnaliser les séries publiées dans le présent bulletin, on se sert de la méthode automatisée du rapport à la moyenne mobile. Le programme-type utilisé à cette fin est la variante X-II du United States Bureau of the Census Method 11(1). Ce programme offre plusieurs possibilités de désaisonnalisation des séries. Pour les parties A, B et D, on utilise la méthode de l'"Ajustement de la tendance cyclique générale pour les grèves", laquelle modifie les valeurs extrêmes avant le calcul de la tendance cyclique. Cet ajustement des valeurs extrêmes réduit sensiblement l'effet des grèves importantes, prolongées, ou d'autres éventualités semblables. Il convient toutefois de remarquer que cet ajustement se répercute également sur les variations brusques causées par les hauts et les bas du cycle commercial. Les "Heures

(1) Le U.S. Bureau of the Census a publié plusieurs ouvrages à ce sujet. Pour une description générale, voir le Technical Paper No. 15 du United States Bureau of the Census — The X-II Variant of the Census Method II Seasonal Adjustment Program; février 1967.

in part "C" were seasonally-adjusted by using the prior adjustment option to adjust for the influence of the day on which Christmas falls on the number of hours worked in the reference period of last 7 days in December. In the case of these series, Table D-11, i.e. "Final seasonally-adjusted series" and D-12 i.e. "Final Trend Cycle" are derived from X-11 generated prior-adjusted original series. In Table BO1 for the "Average Weekly Hours" data, however, original series are published.

Four tables are given for each series, the fourth table presented may be either D-12 "Final Trend Cycle" or F-01 "MCD Moving Average" depending on the MCD (Months for cyclical dominance) of each series. Since the MCD moving average and the final seasonally-adjusted series correspond when the MCD value is 1, Table D-12 is published for all such series (see Appendix "A" for MCD values). For series for which the MCD span was 2 or 3, the MCD Moving Average is shown. On the other hand, for series with MCD span of 4, 5, or 6, the "Final Trend Cycle" (D-12) table is presented. This methodology was selected with a view to provide the user with a reasonably current estimate of trend cycle where the MCD span was relatively short and in the case of series with MCD span of 4 or more, the short-term movements are smoothed out to reveal the trend.

The tables presented in this report represent:

Table B01

Unadjusted series, i.e. original series — as inputted to the computer for seasonal adjustments.

Table D10

Final seasonal-adjustment factors. In this table, factors for the year 1972 are estimated one year ahead. The year-ahead seasonal factors are computed in the X-11 program by adding to the last years' factor for a particular month, one-half the difference between that factor and the one for 12 months earlier. It is assumed in the computation of forecast factors that the seasonal pattern will continue to be similar to that observed in the previous years. More specifically, the estimated factors by month are assumed to move in the same direction as was the case in the preceding two years, but at half the rate. If, there is evidence that the seasonal pattern has changed, then the forecast factors may not be used for seasonally adjusting current data.

Hebdomadaires Moyennes" (partie C) ont été désaisonnalisées en utilisant la méthode de la rectification préalable afin de prendre en considération dans le nombre d'heures travaillées au cours de la période de référence des sept derniers jours de décembre l'effet du jour où tombe Noël. Dans ces séries, le Tableau D-ll (Séries finales désaisonnalisées) est obtenu en divisant les séries originales (et non pas les séries originales préalablement rectifiées) par les facteurs saisonniers provenant des données rectifiées préalablement.

Chaque série contient quatre tableaux, le quatrième tableau est soit du type D-12 ("Tendance cyclique finale") ou F-01 ("Moyenne mobile M.D.C."), selon le M.D.C. (mois de dominance cyclique) de chaque série. Puisque la moyenne mobile M.D.C. et les séries finales désaisonnalisées sont égales lorsque la valeur M.D.C. est de 1, le Tableau D-12 est publié pour toutes ces séries (voir Appendice "A" pour la valeur des M.D.C.). La moyenne mobile M.D.C. apparaît dans le cas des séries dont la durée du M.D.C. est 2 ou 3. Par contre, pour les séries dont la durée du M.D.C. est de 4, 5, ou 6, on utilise le tableau D-12 (Tendance cyclique finale). On a choisi cette méthode afin de fournir à l'utilisateur une estimation suffisammement actuelle de la tendance cyclique lorsque la durée du M.D.C. était relativement courte et, lorsque les séries comportaient un intervalle de 4 ou plus, de lisser les mouvements à court terme afin de faire apparaître la tendance.

Les tableaux du présent bulletin donnent les renseignements suivants:

Tableau B0-1

Séries non désaisonnalisées, c'est-à-dire les séries originales introduites dans l'ordinateur pour désaisonnalisation.

Tableau D10

Facteurs finals de désaisonnalisation. Dans ce tableau, les facteurs pour 1972 sont estimés avec un an d'avance. Dans le programme X-11, les facteurs saisonniers pour l'année à venir sont calculés en ajoutant au facteur de l'année précédente, pour un mois donné, la moitié de la différence entre ce facteur et celui du mois correspondant de l'année précédente. Dans le calcul des facteurs prévisionnels, on suppose que la tendance saisonnière sera la même que pour les années antérieures. Plus précisément, on suppose que les facteurs estimés pour chaque mois suivront la même tendance qu'au cours des deux années précédentes, mais à un rythme ralenti de moitié. Dans le cas où la tendance saisonnière aurait changé, il serait impossible de se servir des facteurs prévisionnels pour désaisonnaliser les données courantes.

Table D11

Final seasonally-adjusted series.

Table D12

Final trend cycle: the moving average used to estimate the trend cycle is selected on the basis of amplitude of irregular variations in the data relative to the long-term systematic variations. This variable trend cycle curve routine is applied to the seasonally-adjusted series modified for extremes. For further technical details, see U.S. Bureau of the Census "Technical Paper No. 15 — The X-11 Variant of the Census Method II Seasonal Adjustment Program.

Table F01

MCD moving average. The MCD, or the months for cyclical dominance, indicates the smallest span of months in which the average change in the cyclical factor is greater than that in the irregular factor. MCD value for the smoothest series is one whereas it is 6 for the most erratic series. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Appendices "A" to "D" contain tables showing MCD values for each of the seasonally-adjusted series included in the tabular pages of this report.

Tableau Dll

Séries finales désaisonnalisées.

Tableau D12

Tendance cyclique finale: on a choisi la moyenne mobile destinée à évaluer la tendance cyclique en fonction de l'amplitude des variations irrégulières des données par rapport aux variations systématiques à long terme. Ce traitement de la courbe de tendance cyclique variable est appliqué aux séries désaisonnalisées modifiées afin d'éliminer les extrêmes. Pour plus de renseignements techniques, voir U.S. Bureau of the Census, Technical Paper No. 15 — The X-11 Variant of the Census Method II Seasonal Adjustment Program.

Tableau F01

Moyenne mobile M.D.C. Les M.D.C., ou mois de dominance cyclique, sont les plus petits intervalles, en mois, où la variation moyenne du facteur cyclique est supérieure à celle du facteur irrégulier. La valeur des M.D.C. est de 1 pour les séries les plus régulières mais de 6 pour les séries les plus irrégulières. En appliquant la moyenne mobile pour la période égale aux M.D.C., les mouvements irréguliers qui peuvent dissimuler la tendance générale sous-jacente tendent à s'amortir.

Les valeurs de M.D.C. pour chacune des séries désaisonnalisées figurant dans les tableaux du présent bulletin sont contenues dans les appendices "A" à "D".

Employment, earnings and hours seasonally-adjusted series

January 1961-December 1977

Emploi, rémunérations et heures séries désaisonnalisées

Janvier 1961-décembre 1977

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publications Distribution, Statistics Canada, Ottawa, K1A 0T6, or to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9.

Inquiries about this publication should be addressed to:

Employment and Payrolls Section, Labour Division.

Statistics Canada, Ottawa, K1A 0T6 (telephone: 992-5613) or to a local office of the bureau's User Advisory Services Division:

St. John's (Nfld.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(569-5405)
Edmonton	(425-5052)
Vancouver	(666-3695)

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1-800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

Nota

On peut se procurer cette publication, ainsi que toutes les publications du gouvernement du Canada, auprès des agents autorisés locaux, dans les librairies ordinaires ou par la poste.

Les commandes par la poste devront parvenir à Distribution des publications, Statistique Canada, Ottawa, K1A 0T6, ou à Imprimerie et édition, Approvisionnements et services Canada, Ottawa, K1A 0S9.

Toutes demandes de renseignements sur la présente publication doivent être adressées à:

Section des statistiques de l'emploi et de la rémunération, Division du travail.

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 992-5613) ou à un bureau local de la Division de l'assistance-utilisateurs situé aux endroits suivants:

St. John's (TN.) Halifax Montréal Ottawa Toronto Winnipeg Regina Edmonton	(726-0713) (426-5331) (283-5725) (992-4734) (966-6586) (949-4020) (569-5405) (425-5052)
Edmonton Vancouver	(425-5052) (666-3695)

On peut obtenir une communication gratuite avec le service régional d'information statistique de la Nouvelle-Écosse, du Nouveau-Brunswick et de l'Île-du-Prince-Edouard en composant 1-800-565-7192. En Saskatchewan, on peut communiquer avec le bureau régional de Regina en composant 1-800-667-3524, et en Alberta, avec le bureau d'Edmonton au numéro 1-800-222-6400

Employment, earnings and hours

Seasonally-adjusted series

January 1961-December 1977

This publication contains monthly data for 1961 to 1977 inclusively which supersede data previously published in Employment, Earnings and Hours, Seasonally-adjusted Series, January 1961-December 1971. Future issues of this publication will be produced each year and will contain approximately ten years of monthly data.

Emploi, rémunérations et heures

Séries désaisonnalisées

Janvier 1961-décembre 1977

Ce bulletin renferme des données mensuelles pour les années 1961 à 1977 inclusivement en remplacement des données publiées antérieurement dans le bulletin intitule Emploi, rémunérations et heures, sénes désaisonnalisées, janvier 1961-décembre 1971. Cette publication paraîtra annuellement à l'avenir et renfermera des données mensuelles pour une période d'environ dix ans.

Introduction

This report presents seasonally-adjusted statistics for a larger number of series than those published regularly in *Employment, Earnings and Hours* (Catalogue 72-002) and in the *Canadian Statistical Review* (Catalogue 11-003). The publication is organized into four parts as follows: Part I: Employment Indexes; Part II: Average Weekly Earnings; Part III: Average Weekly Hours; Part IV: Average Hourly Earnings.

Series, not adjusted for seasonal variations, are obtained from the monthly survey of Employment, Payrolls and Manhours. This survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. The reference period is the last week in each month. Further details as well as definitions and explanations relating to this survey may be obtained from the "Concepts and Methods" in the back of this publication.

Each table presented in this report consists of:

- 1. Unadjusted series, i.e., original series, as inputted to the computer for seasonal adjustments.
- 2. Final seasonal-adjustment factors. The seasonal factors are computed in the X-11 program by adding to the last year's factor for a particular month, one-half the difference between that factor and the one for 12 months earlier. It is assumed in the computation of forecast factors that the seasonal pattern will continue to be similar to that observed in the previous years. More specifically, the estimated factors by month are assumed to move in the same direction as was the case in the preceding two years, but at half the rate. If there is evidence that the seasonal pattern has changed, then the forecast factors may not be used for seasonally adjusting current data.
- 3. Final seasonally-adjusted series.
- 4. Final trend cycle. The moving average used to estimate the trend cycle is selected on the basis of amplitude of irregular variations in the data relative to the long-term systematic variations. This variable trend cycle curve routine is applied to the seasonally-adjusted series modified for extremes. For further technical details, see U.S. Bureau of the Census "Technical Paper No. 15 The X-11 Variant of the Census Method II Seasonal Adjustment Program".

Introduction

Le présent bulletin contient un plus grand nombre de séries désaisonnalisées que la publication *Emploi, gains et durée du travail* (nº 72-002 au catalogue) et la *Revue Statistique du Canada* (nº 11-003F au catalogue). Le bulletin comporte quatre parties: partie I: Indices de l'emploi; partie II: Rémunérations hebdomadaires moyennes; partie III: Heures hebdomadaires moyennes; partie IV: Rémunérations horaires moyennes.

C'est l'enquête mensuelle sur l'emploi, la rémunération et les heures-hommes qui fournit les séries non désaisonnalisées. Cette enquête n'est menée qu'auprès des sociétés d'une certaine taille, c'est-à-dire celles qui comptent 20 salariés ou plus au cours d'un mois quelconque de l'année. La période de référence est la dernière semaine de chaque mois. Des détails supplémentaires ainsi que des définitions et des explications relatives à cette enquête sont présentés à la fin de cette publication sous la rubrique "Concepts et méthodes".

Chacun des tableaux du présent bulletin donne les renseignements suivants:

- Séries non désaisonnalisées. Ce sont les séries originales introduites dans l'ordinateur pour désaisonnalisation.
- 2. Facteurs finals de désaisonnalisation. Dans le programme X-11, les facteurs saisonniers sont calculés en ajoutant au facteur de l'année précédente, pour un mois donné, la moitié de la différence entre ce facteur et celui du mois correspondant de l'année précédente. Dans le calcul des facteurs prévisionnels, on suppose que la tendance saisonnière sera la même que pour les années antérieures. Plus précisément, on suppose que les facteurs estimés pour chaque mois suivront la même tendance qu'au cours des deux années précédentes, mais à un rythme ralenti de moitié. Dans le cas où la tendance saisonnière aurait changé, il serait impossible de se servir des facteurs prévisionnels pour désaisonnaliser les données courantes.
- 3. Séries finales désaisonnalisées.
- 4. Tendance cyclique finale. On a choisi la moyenne mobile destinée à évaluer la tendance cyclique en fonction de l'amplitude des variations irrégulières des données par rapport aux variations systématiques à long terme. Ce traitement de la courbe de tendance cyclique variable est appliqué aux séries désaisonnalisées modifiées afin d'éliminer les extrêmes. Pour plus de renseignements techniques, voir U.S. Bureau of Census, Technical Paper No. 15 The X-11 Variant of the Census Method II Seasonal Adiustment Program.

5. In some series, MCD moving averages replace the final trend cycle. The MCD, or the months for cyclical dominance, indicates the smallest span of months in which the average change in the cyclical factor is greater than that in the irregular factor. MCD value for the smoothest series is one (at which point the MCD moving average data equals the final seasonally-adjusted data), whereas it is six for the most erratic series. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Appendices 1 to 4 contain tables showing MCD values for each of the seasonally-adjusted series included in the tabular pages of this report.

5. Moyenne mobile MDC. Les MDC, ou mois de dominance cyclique, sont les plus petits intervalles, en mois, où la variation moyenne du facteur cyclique est supérieure à celle du facteur irrégulier. La valeur des MDC est de un pour les séries les plus régulières (en cette circonstance, les données des moyennes mobiles MDC sont les mêmes que les données finales désaisonnalisées) mais de six pour les séries les plus irrégulières. En appliquant la moyenne mobile pour la période égale aux MDC, les mouvements irréguliers qui peuvent dissimuler la tendance générale sous-jacente tendent à s'amortir.

Les valeurs de MDC pour chacune des séries désaisonnalisées figurant dans les tableaux du présent bulletin sont contenues dans les appendices 1 à 4.

Concepts and Methods

Concepts et méthodes

#### **CONCEPTS AND METHODS**

#### **Objectives**

The Monthly Employment, Payrolls and Manhours survey is designed to measure the month-to-month trends of employment, paid hours and earnings for the commercial sector of the economy with the exclusion of agriculture, fishing and trapping.

These measures are expressed in an index form for employment and as weekly averages for earnings and hours paid for. The data are compiled and published at detailed industrial and geographic levels.

#### Source of Data

The statistics contained in this report are based on information obtained through a mail census of "larger firms".

The firm is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but in some cases the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

A firm is considered as "larger" when it employs 20 or more persons in any one month of the year. Although the intent of the survey is to cover all such firms, it also includes some firms with less than 20 employees and excludes some firms with more than 20 employees; the reason is that, in practice, it is not always possible to capture promptly enough employment fluctuations in individual firms.

#### Universe

The universe for the survey is derived from a central file of employers maintained by the Business Register and Profiling Division of Statistics Canada.

#### Coverage

All commercial industries are covered by the survey, with the exception of agriculture, fishing and trapping; by definition such non-commercial sectors as education and related services, health and welfare

#### CONCEPTS ET MÉTHODES

#### Objectifs

L'enquête mensuelle sur l'emploi, la rémunération et les heures-hommes a pour objet de mesurer d'un mois à l'autre les tendances de l'emploi, des heures rémunérées et des gains touchés dans les secteurs commerciaux de l'économie à l'exception de l'agriculture, de la pêche et du piégeage.

Ces mesures sont exprimées sous forme d'indices dans le cas de l'emploi et de moyennes hebdomadaires dans le cas des gains touchés et des heures rémunérées. Les données sont rassemblées et publiées à des niveaux de détails raffinés selon l'activité économique et le lieu géographique.

#### Source des données

Les statistiques présentées dans ce bulletin sont fondées sur des renseignements obtenus au moyen d'un recensement postal des "grandes entreprises".

Le terme "entreprise" désigne toute entité commerciale constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme d'organisation comme une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité économique.

Une entreprise est considérée comme une "grande entreprise" si elle emploie 20 personnes ou plus pendant un mois quelconque de l'année. Bien que l'objet de l'enquête soit d'appréhender toutes les grandes entreprises, elle vise cependant quelques entreprises employant moins de 20 salariés et n'englobe pas toutes les entreprises comptant plus de 20 salariés, car, en pratique, il est presque toujours impossible de saisir rapidement toutes les fluctuations de l'emploi dans chacune des entreprises.

#### Univers

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu à jour par la Division des profils et du registre des entreprises de Statistique Canada.

#### Champ de l'enquête

L'enquête vise tous les secteurs commerciaux de l'activité économique à l'exception de l'agriculture, de la pêche et du piégeage; en sont donc exclus les secteurs non commerciaux comme l'enseignement et les services connexes, la santé et

services, religious organizations, private households and public administration and defense are excluded. Because the survey is limited to "larger firms", the proportion of total employment covered by the survey varies among industries, provinces and urban areas. The following table shows annual employment as reported in the survey as a percentage of the estimated total number of employees, the latter being estimated by adding together data from the Employment, Payrolls and Manhours survey and data from a sample survey of smaller firms plus supplementary surveys. Estimates of the total number of employees are published in Estimates of Employees by Province and Industry (Catalogue 72-008).

les oeuvres sociales, les organismes religieux, les ménages privés et l'administration publique et la défense. Étant donné que l'enquête ne vise que les "grandes entreprises", la proportion de l'emploi total qu'elle appréhende varie d'une branche d'activité, d'une province et d'une région urbaine à l'autre. Le tableau qui suit indique l'emploi annuel relevé par l'enquête, exprimé en pourcentage du nombre estimatif total de salariés, l'estimation de ce dernier chiffre étant calculée en additionnant les données de l'enquête sur l'emploi, la rémunération et les heures-hommes avec celles d'une enquête par sondage et d'enquêtes supplémentaires menées auprès des petites entreprises. Les estimations du nombre total de salariés sont publiées dans le bulletin intitulé Estimations du nombre d'employés par province et par industrie, no 72-008 au catalogue.

TEXT TABLE I. Larger-firm Survey Employment as a Percentage of Total Estimated Employment, by Industry Division, for Canada and Provinces, 1977 Annual Averages¹

TABLEAU EXPLICATIF I. Emploi des grandes entreprises en tant que pourcentage de l'estimation de l'emploi total par branche d'activité pour le Canada et les provinces, moyennes annuelles de 19771

¹ Total estimated employment is derived by adding together data from the employment and payrolls survey of larger-firms and data from a sample survey of smaller firms plus

supplementary surveys.

1 L'estimation de l'emploi total est obtenue en additionnant les données de l'enquête sur l'emploi et la paie dans les grandes entreprises à celles d'une enquête par échantillonnage dans les petites entreprises et d'autres enquêtes supplémentaires.

dans les petites entreprises et d'autres enquetes supplementaires.

2 Includes health (except hospitals), recreational, business, personal and miscellaneous services only.

2 Comprend seulement les services récréatifs, commerciaux, personnels, d'hygiène (sauf les hôpitaux) et divers.

Non-commercial services including education and related services, health and welfare services, religious organizations and private households, are included in total estimated employment but are not part of the larger-firm employment survey.

3 Non-commercial services including education and related services, health and welfare services, religious organizations and private households, are included in total estimated employment but are not part of the larger-firm employment survey.

Employment out are not part of the targer-firm employment survey.

Les services non commerciaux, y compris l'enseignement et le services connexes, la santé et les oeuvres sociales, les organismes religieux et les ménages privés, sont inclus dans l'estimation de l'emploi total mais ne sont pas couverts par l'enquête sur l'emploi dans les grandes entreprises.

Excludes non-commercial services, public administration, defence, fishing and trapping.

Ne comprend pas les services non commerciaux, l'administration publique, la défense, la pêche et le piégeage.

Non-commercial services, public administration, defence, fishing and trapping are included in total estimated employment, but are not part of the larger-firm employment

Les services non commerciaux, l'administration publique, la défense, la pêche et le piégeage sont inclus dans l'estimation de l'emploi total mais ne sont pas couverts par l'enquête sur l'emploi dans les grandes entreprises.

#### Industrial Classification

All firms are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straight forward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The establishment, typically a factory, mine, store or a similar unit is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into reporting units which, although not capable of reporting all basic industrial statistics, can report employment and payroll data for particular locations.

The industrial classification of the statistics contained in this report is based on the Standard Industrial Classification for 1960. A description of the various industries and groups of industries is contained in the Standard Industrial Classification Manual, Catalogue 12-501.

**Industrial composite (031-899).** It is the sum of all the industries included in the survey (see Coverage).

Durable goods manufacturing (durable). Comprises wood products (250-259), furniture and fixtures (260-269), primary metal industries (290-298), metal fabricating industries (300-309), machinery except electrical (310-318), transportation equipment (320-329), electrical products (330-339), and nonmetallic mineral products (340-359).

Non-durable goods manufacturing (non-durable). Consists of food and beverages (100-147), tobacco processing and products (150-153), rubber products (160-169), leather products (170-179), textile products (180-229), knitting mills (230-239), clothing (240-249), paper and allied industries (270-274), printing, publishing and allied industries (280-289), petroleum and coal products (360-369), chemical and chemical products (370-379), and miscellaneous manufacturing industries (380-399).

#### Classement par activité économique

Toutes les entreprises appartiennent à une branche d'activité économique qui est déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorqu'elle en exerce plus d'un, par exemple lorqu'elle possède plus d'un établissement. À des fins statistiques, on définit l'établissement, qui consiste habituellement en une usine, une mine, un magasin ou une unité semblable, comme la plus petite unité constituant un ensemble d'exploitation distinct en mesure de déclarer tous les éléments de base de la statistique des activités économiques, qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour permettre d'obtenir des statistiques géographiques détaillées, l'établissement est souvent subdivisé en unités déclarantes qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi et la rémunération pour des endroits particuliers.

Le classement des statistiques présentées ici s'inspire de la Classification type des industries de 1960. Vous trouverez une description des diverses activités économiques et divers groupes d'activité économique dans le manuel de la Classification type des industries, nº 12-501F au catalogue.

Ensemble des industries (031 - 899). L'ensemble des activités économiques visées par l'enquête (voir champ de l'enquête).

Manufactures, biens durables (durable). L'ensemble de l'industrie des produits du bois (250-259), de l'industrie des meubles et accessoires d'ameublement (260-269), de l'industrie des métaux (formes primaires) (290-298), de l'industrie des produits métalliques (300-309), de l'industrie de la machinerie (sauf le matériel électrique) (310-318), de l'industrie du matériel de transport (320-329), de l'industrie des appareils et du matériel électriques (330-339), et de l'industrie des produits minéraux non métalliques (340-359).

Manufactures, biens non durables (non durable). L'ensemble de l'industrie des aliments et boissons (100-147), de l'industrie du traitement et des produits du tabac (150-153), de l'industrie des produits du caoutchouc (160-169), de l'industrie des produits du cuir (170-179), de l'industrie des produits du tex tile (180-229), de l'industrie de la bonneterie (230-239), de l'industrie du vétement (240-249), de l'industrie du papier et des produits connexes (270-274), de l'imprimerie, de l'édition et des industries connexes (280-289), de l'industrie du pétrole, du charbon et de leurs dérivés (360-369), de l'industrie chimique et des produits connexes (370-379), et des industries manufacturières diverses (380-399).

Building construction (404, 421). It is the sum of general contractors (404) and special trade contractors (421).

Engineering construction (406, 409). It includes highway, bridge and street construction (406) and other construction (409).

The synthetic textile industry (201). Is sub-divided into spun yarn and fabrics (2011) and filament yarn and staple fibres (2012).

Head offices, sales and auxiliary units. This special group includes head offices, sales branches and research laboratories for the following major groups of manufacturing: food and beverages (100), rubber products (160), paper and allied industries (270), primary metal industries (290), electrical products (330), and chemicals and chemical products (370).

#### Geographic Classification

Reporting units are assigned to a province, a county (as defined by the Census of Population) and, where applicable, to an urban area, Data for Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are aggregated in some tables to give statistics for the Atlantic region. Similarly, data for Manitoba, Saskatchewan and Alberta are added together to provide totals for the Prairie region. The 1966 Census of Population's "Metropolitan Area" definitions were used for the 19 applicable urban areas; the definitions used for other urban areas are based on a labour market concept. The urban areas usually consist of the urban centre as well as the surrounding territory. A list showing the territory included in each tabulated urban area is available from the Employment and Payrolls Section. The reporting units not located in a tabulated urban area or not allocated to a compiled county, are included in provincial, regional and national totals.

#### **Definitions**

#### Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are permitted to report for their last pay period or pay periods in each month. When the reported pay period is longer than one

Bâtiment (404, 421). L'ensemble des entrepreneurs généraux (404) et des entrepreneurs spécialisés (421).

Génie civil (406, 409). L'ensemble de la construction de routes, ponts et rues (406) et des autres constructions (409).

L'industrie des textiles synthétiques (201). Est subdivisée en filés et tissus (2011) et en filés de filaments et fibres discontinues (2012).

Sièges sociaux, bureaux de vente et services auxiliaires. Ce groupe spécial comprend les sièges sociaux, les bureaux de ventes, les succursales et les laboratoires de recherche des entreprises faisant partie des groupes d'activité économique suivants: industries des aliments et boissons (100), industrie du caoutchouc (160), industrie du papier et des produits connexes (270), industrie des métaux (formes primaires) (290), industrie des appareils et du matériel électriques (330) et industrie chimique et des produits connexes (370).

#### Classement géographique

On attribue les unités déclarantes à une province, un comté (selon la définition utilisée aux fins du recensement de la population) et, s'il y a lieu, à une région urbaine. Les données se rapportant à Terre-Neuve, à l'Île-du-Prince-Édouard, à la Nouvelle-Écosse et au Nouveau-Brunswick sont regroupées dans certains tableaux pour présenter l'ensemble des statistiques de la région de l'Atlantique. De la même façon, les données relatives au Manitoba, à la Saskatchewan et à l'Alberta sont additionnées pour indiquer les totaux de la région des Prairies. La définition du terme "région métropolitaine" utilisée aux fins du recensement de la population de 1966 a été retenue pour les 19 régions urbaines; les définitions utilisées pour les autres régions urbaines sont fondées sur un concept du marché du travail. Une région urbaine se compose habituellement d'un centre urbain et du territoire qui l'entoure. Vous pouvez vous procurer une liste indiquant le territoire compris dans chaque région urbaine figurant dans les tableaux en vous adressant à la Section des statistiques de l'emploi et de la rémunération. Les chiffres des unités déclarantes situées ailleurs que dans une région urbaine indiquée dans les tableaux ou non attribuées à un comté dont le nom figure sur la liste font partie des totaux provinciaux, régionaux et nationaux.

#### **Définitions**

#### Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. En pratique, étant donné que peu d'entreprises tiennent des registres de paye pour cette période précise, on leur permet de faire porter leur déclaration sur la (les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration

week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period. If, owing to strikes, holidays or other similar factors, the data for the reported period are not representative of the reference period, adjustments are made to accurately reflect the situation of the last seven days of the month.

#### **Employee**

All persons drawing pay for services rendered or for paid absence during the survey reference period and for whom an employer makes CPP or QPP and/or UIC contributions constitute employees.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment), and casual employees (those who are hired for discontinuous periods or on an irregular basis and who worked at least seven hours during the reference period).

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensionners, home workers, members of elected or appointed bodies, military personnel and persons providing services to an establishment on a contract basis.

An employee working for a part of the reference period and unemployed or on strike for the rest is counted as employed. Persons not receiving pay for the entire reference period are excluded.

The employees are classified into two broad occupational categories, namely: salaried employees and wage earners:

Wage earners. This group includes employees engaged in actual production and related operations, including maintenance, warehouse and delivery staffs, security staff, routemen, driver-salesmen, sales clerks in retail stores, waitresses, and working foremen performing functions similar to those of the employees whom they supervise, etc. All the above-mentioned employees are considered to be wage earners regardless of whether their earnings are based on monthly, hourly or other rates of pay. Average weekly wages are computed for all wage earners but average weekly hours and average hourly earnings are calculated only for wage earners for whom hours data are available.

dépasse une semaine, on rajuste les données en effectuant le calcul suivant: on divise le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration. Si, en raison d'une grève, d'un jour férié ou d'autres facteurs semblables, les données déclarées ne sont pas représentatives de la période de référence, on procède aux rajustements qui s'imposent afin de traduire fidèlement la situation pendant les sept derniers jours du mois.

#### Salarié

Toute personne qui est rétribuée pour ses services ou ses absences pendant la semaine de référence et pour laquelle l'employeur verse des contributions au RPC ou au RRQ et à la caisse d'assurance-chômage, est un salarié.

La catégorie "salariés" comprend les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels (ceux qui sont embauchés de façon temporaire ou irrégulière et qui ont travaillé au moins sept heures au cours de la période de référence).

Le concept des salariés exclut les propriétaires et les partenaires d'entreprises non constituées en corporation et ceux qui possèdent un bureau pour l'exercice d'une profession, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres de corps élus ou nommés, le personnel militaire et les personnes fournissant des services à un établissement sur une base forfaitaire.

Sont visées les personnes qui ont travaillé pendant une partie de la période de référence mais qui étaient en chômage ou en grève pendant le reste de la période. Les personnes n'ayant pas touché de paye pour la période de référence entière ne sont pas visées.

Les salariés sont classés en deux catégories professionnelles, soit les employés et les ouvriers:

Ouvriers. Cette catégorie comprend les personnes travaillant effectivement à la production et à des opérations assimilées, en particulier le personnel d'entretien, d'entrepôt et de livraison, le personnel de sécurité, les chauffeurs-livreurs, les vendeurs itinérants, les commis des magasins de détail, les serveuses et les contremaîtres remplissant des fonctions analogues à celles des ouvriers dont ils ont la charge, etc. Toutes ces personnes sont considérées comme des ouvriers, que leurs gains soient fondés sur des taux de rémunération mensuels, horaires ou autres. Les salaires hebdomadaires moyens sont calculés pour tous les ouvriers, mais les heures hebdomadaires moyennes et les gains horaires moyens sont calculés uniquement pour ceux dont on connaît le nombre d'heures de travail.

Salaried employees. This category comprises executive, administrative, supervisory, technical and professional personnel, commission agents, and travelling salesmen directly responsible to the administration, as well as general office, clerical and related workers in the office and plant. In addition, working directors of incorporated businesses are included in this category.

#### **Earnings**

Earnings of wage earners and salaried employees represent gross pay for the week, before deductions for taxes, unemployment insurance contributions, etc. Gross pay includes salaries, straight time wages, piecework and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week. The payroll concept does not include supplementary labour costs such as employers' contributions to unemployment insurance. medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or directors' fees.

The term "earnings" is used to denote the total of weekly wages of the wage earners and salaries of the salaried employees. The publications prior to March 1971 contained these data combined under "Average Weekly Wages and Salaries". These data are comparable with "Average Weekly Earnings" of total employees in the present publication. The system now provides separate earnings data for all wage earners and salaried employees whereas formerly only "Average Weekly Wages" for hourly-rated wage earners were available.

#### Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

#### Standard Work Week

The standard work week is the number of hours or days of work normally scheduled for the majority of full-time employees.

Employés. Cette catégorie comprend les directeurs, les administrateurs, les surveillants, les cadres techniques et spécialisés, les agents à la commission, les voyageurs de commerce relevant directement de l'administration, ainsi que les employés de bureau, les commis et les travailleurs assimilés, au bureau et à l'usine. Les membres des conseils d'administration d'entreprises constituées en corporation qui travaillent dans l'entreprise sont également compris dans cette catégorie.

#### Gains

Les gains des ouvriers et des employés représentent la rémunération brute de la semaine, avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc. La rémunération brute comprend les traitements, les salaires au taux ordinaire, les gains provenant du travail à la pièce et les commissions régulières, les primes au rendement, les primes de vie chère et autres gratifications versées régulièrement, les gains pour travail supplémentaire et les paiements versés aux personnes en congé pavé pendant la semaine de référence. Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents ni les jetons de présence des administrateurs.

Le terme "gains" désigne l'ensemble des salaires hebdomadaires des ouvriers et des traitements des employés. Les publications antérieures à mars 1971 présentaient les données réunies sous le titre Average Weekly Wages and Salaries. Ces données sont comparables aux "gains hebdomadaires moyens" des salariés pris en compte ici. Ce système permet maintenant d'avoir des données distinctes pour tous les ouvriers et les employés tandis qu'autrefois on ne pouvait connaître que les "salaires hebdomadaires moyens" des ouvriers rémunérés à l'heure.

#### Absence payée

Les absences payées comprennent les jours fériés payés, les vacances, les congés de maladie, ainsi que les congés d'accident du travail et les congés personnels tels que les congés de deuil, les congés pour fonctions de jury, etc.

#### Semaine normale de travail

La semaine normale de travail est le nombre d'heures ou de jours de travail normalement prévus pour la majorité des salariés à temps plein.

#### Methodology

The data appearing in this report were collected by means of questionnaires mailed monthly to all firms which employ 20 or more persons in any one month of the year. In order to improve the quality of data, the response rate is increased through two reminders mailed to all non-respondents one month and two months after the original mail-out. If the two reminders do not produce a response, the Field Division of Statistics Canada attempts to obtain the required data by telephone or in a personal interview. These steps result in a final response rate of over 80%. Firms for which no response is obtained are still accounted for in the employment, earnings and hours tables of this publication. To do this, the unknown figures are replaced by figures based on the behaviour of the reporting unit in the previous month and on the behaviour of reporting units which are similar with respect to industrial classification, size and geographic location and which have responded for the month in question.

#### Data Edit

All the completed questionnaires which reach Statistics Canada are carefully edited for completeness, consistency and accuracy both manually and using computer edit procedures. To perform the computerized edit, the responses are assembled into imputation groups which are formed on the basis of industrial classification, geographic area and size of the reporting unit. The composition of these groups is such that they consist of reporting units which behave similarly with respect to the characteristics being measured and with respect to relationships between these characteristics. This edit compares the value of a characteristic (number of employees, hours worked, salary per employee, the ratio of the present number of employees to last month's number of employees, etc.), to the corresponding value of the characteristic for the whole imputation group. The amount by which a characteristic is allowed to vary from the average imputation group value is calculated separately for each group and for each characteristic and depends on the homogeneity and stability of the group itself.

When a figure varies too much from the average value for the imputation group, it is replaced by a value which is at the maximum variance allowed by the computer edit. It is not always possible to find a value within the allowable limit of the computer edit; in such case, the figure is replaced by an imputed value.

This procedure may, in rare occasions, result in changing a figure which was actually correct. This is a small penalty to be paid for a mechanical procedure which detects efficiently many significant errors such

#### Méthodologie

Les données présentées dans cette publication ont été recueillies au moyen de questionnaires postaux envoyés chaque mois à toutes les entreprises employant 20 personnes ou plus au cours d'un mois donné de l'année. Afin d'améliorer la qualité des données, on accroît le taux de réponse en faisant parvenir deux lettres de rappel à toutes les entreprises non répondantes un mois et deux mois après l'envoi du questionnaire. Si elles ne répondent toujours pas après avoir reçu les deux avis, la Division des opérations régionales de Statistique Canada tente d'obtenir les données nécessaires par téléphone ou au moyen d'une interview sur place. Ces mesures permettent généralement de hausser le taux de réponse à plus de 80 %. Les entreprises qui ne répondent pas à l'enquête sont quand même prises en compte dans les tableaux de la publication portant sur l'emploi, les gains et les heures de travail. Pour ce faire, on remplace les chiffres inconnus par des données qui s'inspirent de celles que l'unité déclarante a fournies le mois précédent et de celles fournies par les unités déclarantes qui ressemblent à l'entreprise non répondante sur le plan du classement par activité économique, la taille et le lieu géographique, et qui ont répondu pour le mois observé.

#### Vérification des données

Tous les questionnaires remplis renvoyés à Statistique Canada sont soigneusement vérifiés à la main et par ordinateur pour assurer qu'ils sont complets, cohérents et exacts. Pour être vérifiées par ordinateur, les réponses sont réparties en groupes d'imputation constitués en fonction du classement par activité économique, du lieu géographique et de la taille de l'unité déclarante. La composition de ces groupes est telle qu'ils regroupent des unités déclarantes qui présentent les mêmes caractéristiques et dont les caractéristiques affichent les mêmes liens entre elles. Cette vérification permet de comparer la valeur d'une caractéristique (nombre de salaires, heures de travail, gains par salarié, rapport du nombre actuel de salariés à celui du mois précédent, etc.), par rapport à la valeur de la caractéristique correspondante pour tout le groupe d'imputation. L'écart qui peut séparer la valeur d'une caractéristique et la valeur moyenne de la même caractéristique pour le groupe d'imputation tout entier est calculé séparément pour chaque groupe et pour chaque caractéristique, et dépend de l'homogénéité et de la stabilité du groupe lui-

Lorsqu'un chiffre s'écarte trop de la valeur moyenne pour tout le groupe d'imputation, on le remplace par une valeur qui comporte la variance maximum permise par la vérification par ordinateur. Il n'est pas toujours possible de trouver une valeur qui se situe à l'intérieur de la limite permise par l'ordinateur; si tel est le cas, on remplace le chiffre par une valeur imputée.

Il arrive, en de rares occasions, que ce procédé se solde par la modification indue d'un chiffre qui était exact au départ. Cela n'est pas trop grave si l'on considère que ce procédé mécanique permet de déceler efficacement un grand nombre as misplaced decimal points, mistakes in recording of data and problems due to misunderstanding of definitions or instructions.

#### Imputation

Every month, there are reporting units for which response or a partial response is received and units whose reports fail edits but cannot be corrected by automatic procedures. Some or all the data for those units are imputed. This means that the incorrect or unknown characteristics are replaced by values derived from the other characteristics in the report, from the firm's report of the previous month and from the behaviour of the imputation group to which the firm belongs.

Imputation is used on about 4% of the reports each month. As in the case of automatic error correction, it is possible for a value which is actually correct to be replaced by another value. However, it is more often that an erroneous or non-existant figure is replaced by a figure which is closer to the true value and which is based on the firm's report from the previous month and on the reports of firms in a similar industry, size range and geographic location.

#### Reliability of the Estimates

Because the Monthly Employment, Payrolls and Manhours survey is a census, any inaccuracy in the results is due to non-sampling error. Some of the factors contributing to non-sampling error are the inability to obtain responses from all in-scope reporting units, incorrect responses supplied by respondents and mistakes in recording, coding and processing of the data. Non-sampling errors are difficult to measure and no estimates of this type of error have been obtained for this survey as yet. However, non-sampling errors have been kept to a minimum by the use of a carefully designed and carefully worded questionnaire, the relative simplicity of the data requested, follow-up of non-respondents, thorough editing of data and control of the processing operations.

#### Statistical Presentation

#### **Data Revision**

Each month, statistics for three latest months are prepared by the Employment and Payrolls Section. Data for the first, most current month, are entitled first estimates. They are based on a limited number of returns (usually about 55%) and only highly aggregated figures are released in the Statistics Canada Daily

d'erreurs graves comme des points décimaux mal placés, des erreurs d'inscription des données et des problèmes attribuables à une mauvaise interprétation des définitions ou des instructions.

#### Imputation

Chaque mois, on reçoit une réponse complète ou partielle de certaines unités déclarantes, alors que d'autres renvoient des questionnaires qui sont rejetés à la vérification et qui ne peuvent être corrigés à la machine. Une partie ou la totalité des données pour ces unités doivent donc être imputées. Cela signifie que les caractéristiques incorrectes ou inconnues sont remplacées par des valeurs calculées en fonction d'autres caractéristiques de la même déclaration de l'entreprise, de sa déclaration du mois précédent et des caractétistiques du groupe d'imputation auquel elle appartient.

On effectue une imputation pour environ 4 % des déclarations chaque mois. Comme dans le cas de la correction automatique des erreurs, il est possible qu'une valeur exacte au départ soit remplacée par une autre. Toutefois, il arrive plus souvent qu'un chiffre erroné ou non existant soit remplacé par un chiffre plus proche de la valeur réelle et fondé sur la déclaration de l'entreprise du mois précédent et sur celles d'entreprises qui font partie d'une branche d'activité semblable, appartiennent au même groupe de taille et sont situées dans le même lieu géographique.

#### Fiabilité des estimations

L'enquête sur l'emploi, la rémunération et les heureshommes étant une enquête exhaustive, toute inexactitude
dans les résultats est attribuable à une erreur d'observation.
Parmi les exemples de sources d'erreurs d'observation, citons
l'impossibilité d'obtenir des renseignements de toutes les unités de l'échantillon, les renseignements inexacts fournis par
les entreprises répondantes et les erreurs d'inscription, de codage et de traitement des données. Les erreurs d'observation
sont difficilement quantifiables et l'on n'a pas encore établi
d'estimations de ce genre d'erreur pour cette enquête. Toutefois, on a fait des efforts pour les réduire grâce à la conception et à la formulation soignées des questionnaires, la simplicité relative des données demandées, la relance des entreprises non répondantes, la vérification approfondie des données et le contrôle rigoureux des opérations de traitement.

#### Présentation statistique

#### Révision des données

Chaque mois, la Section des statistiques de l'emploi et de la rémunération prépare des statistiques pour les trois derniers mois. Les données du premier mois, le mois le plus récent, sont appelées "premières estimations". Elles sont fondées sur un nombre limité de déclarations (habituellement environ 55 %) et seuls des chiffres très généraux sont publiés dans le

and the First Estimates table of this publication. Simultaneously, second estimates are prepared for the month immediately preceding the most current data and third estimates for the month prior to that. Both of these latter estimates are of course, of higher quality than that of the first estimates because of the higher rate of returns (approximately 75% and 82% respectively). Consequently, full details for both of these months are shown in Catalogue 72-002.

After completion of the third estimate, further revisions to the data are made to incorporate late returns and corrected information received from respondents or to rectify mechanical errors. Larger corrections are calculated immediately and appear in the historical and special tables and in the column for the previous year in Tables 2, 3 and 4 of Catalogue 72-002.

#### **Index Numbers**

Index numbers are calculated by dividing the current month's employment (or payroll) by the monthly average of the total base year employment (or payroll).

The index numbers constitute a better measure of the monthly trends in statistical series than the actual values because they are not effected by certain statistical changes. For example, a large firm erroneously missing from the survey can be introduced by adjusting both the current and base year data and, thus, will not distort the monthly changes indicated by the index numbers. However, the measure of the monthly trend calculated from the actual value will be biased because the additions which should be reflected in all months are only included from the time the correction is made.

#### Averages

The average weekly hours figure is obtained by dividing total weekly man-hours by the number of wage earners who worked those hours. Average hourly earnings are obtained by dividing total weekly wages of hourly-rated wage earners by their total weekly hours. Both of these averages apply only to the subset of wage earners for whom hourly details are reported. It should be noted that total hours include overtime hours actually worked and that the wage earners total includes part-time wage earners and casuals working more than seven hours during the survey reference week.

Quotidien de Statistique Canada et dans le tableau "Premières estimations" de la présente publication. En même temps, la Section prépare des deuxièmes estimations pour le mois qui précède le mois le plus récent, et des troisièmes pour le mois qui précède celui-là. Bien entendu, ces deux dernières estimations sont de meilleure qualité que les premières en raison de l'obtention d'un plus grand nombre de réponses (environ 75 % pour les deuxièmes estimations et 82 % pour les troisièmes). Par conséquent, le nº 72-002 au catalogue contient tout les détails pour ces deux mois.

Une fois terminées les troisièmes estimations, on effectue d'autres rectifications à la lumière des déclarations des retardataires et des corrections reçues des entreprises enquêtées, ou par suite de la correction de certaines erreurs mécaniques. Les corrections les plus importantes sont effectuées sur-lechamp; elles paraissent dans les tableaux chronologiques et spéciaux ainsi que dans la colonne de l'année précédente aux tableaux 2, 3 et 4 du n° 72-002 au catalogue.

#### Nombres-indices

On obtient les nombres-indices en divisant le nombre total des salariés (ou la rémunération) du mois courant par la moyenne mensuelle du nombre de salariés (ou de la rémunération) de l'année de base.

Les nombres-indices constituent une mesure plus valable des tendances mensuelles observées dans les séries statistiques que les valeurs réelles, car ils ne sont pas touchés par certaines variations statistiques. Par exemple, on peut introduire dans l'enquête une grande entreprise qu'on a oublié de dénombrer lors du listage en rajustant à la fois les données de l'année courante et celles de l'année de base et, ainsi, éviter de fausser les variations mensuelles affichées par les nombres-indices. Toutefois, toute mesure de la tendance mensuelle calculée à partir de la valeur réelle comportera un biais, car les ajouts qui devraient être faits pour tous les mois ne sont effectués qu'à partir du moment où la correction est apportée.

#### Moyennes

On calcule les heures hebdomadaires moyennes en divisant le nombre hebdomadaire total d'heures-hommes par le nombre d'ouvriers qui ont fait ces heures. On obtient les gains horaires moyens en divisant le salaire hebdomadaire total des ouvriers rémunérés à l'heure par le nombre total d'heures de travail qu'ils ont fait par semaine. Ces deux moyennes s'appliquent seulement aux ouvriers dont le nombre d'heures est déclaré. Il convient de remarquer que le nombre total d'heures comprend les heures supplémentaires réelles et que le nombre total d'ouvriers comprend les ouvriers à temps partiel et occasionnels qui ont travaillé plus de sept heures pendant la semaine de référence.

#### Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally-adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, crop cycles, holidays and vacation periods. It should be noted that the seasonally-adjusted series contains irregular as well as long-term cyclical fluctuations.

The X-11 variant of the U.S. Census Method II is used to seasonally adjust the data. This seasonal adjustment system is a complex computer program which differentiates between the seasonal trend and the irregular movements in a series over a number of years and, on the basis of past movements, estimates appropriate seasonal factors for current data. On an annual basis the entire historical series of seasonally-adjusted data is revised in light of the most recent information on changes in seasonality.

This system is used to calculate the seasonallyadjusted employment index numbers, and the average weekly hours and average hourly earnings for selected statistical series.

#### Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

#### Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Les mouvements saisonniers sont ceux qui sont causés par des événements annuels réguliers comme les changements de température, les cycles agricoles, les jours fériés et les vacances. Il convient de noter que la série désaisonnalisée contient des fluctuations irrégulières ainsi que des fluctuations cycliques à long terme.

La variante X-11 de la *Method II* de désaisonnalisation du *U.S. Bureau of the Census* est utilisée pour désaisonnaliser. Ce système permet de déceler les mouvements saisonniers, tendanciels et irréguliers au cours d'une période de plusieurs années et, à la lumière des mouvements passés, d'estimer les coefficients saisonniers appropriés pour l'année en cours. Sur une base annuelle, toute la série chronologique des données désaisonnalisées est révisée à la lumière des renseignements les plus récents sur les changements de saisonnalité.

Ce système est utilisé pour calculer les nombres-indices désaisonnalisés de l'emploi, ainsi que les heures hebdomadaires moyennes et les gains horaires moyens pour certaines séries statistiques.

#### Confidentialité

Les données présentées ici ont été examinées afin d'assurer que la confidentialité des réponses des entreprises soit respectée.
